

Education Suite

Connect district, campus, school, facility, staff, continuity, reunification, training and emergency coordination.

The operating problem

Education emergencies and disruptions move quickly across schools, districts, facilities, transportation, communications, family support, continuity and public-safety partners. Vanguard VEM helps keep those responsibilities and handoffs connected.

Who it supports

Public and private school systems, higher education, district leadership, safety teams, facilities, transportation, continuity and emergency-management partners.

Connected workflow

1 Select district / campus AOI	2 Review plans and readiness	3 Schedule / exercise / activate	4 Coordinate staff and resources	5 Track decisions / reunification / continuity actions	6 Handoff and improve
--	--	--	--	--	---------------------------------

What users can do

- Schedule preparedness meetings, trainings, exercises and routine safety work.
- Convert emergency and continuity plans into trackable actions when activated.
- Track decisions, resources, staff assignments and carry-forward meeting actions.
- Use Operational Assurance to identify overdue work, ownership gaps and readiness concerns.

Supports local educational authority and established safety plans; it does not replace district policy, public-safety command, student-information systems or required reporting.

Recovery 35.6 - Connected operational

Vanguard VEM now goes beyond storing operational records. The system can surface work that needs attention and connect decisions, resources, meetings, qualifications, plans and handoffs to the same operational context.

Connected capability	Recovery 35.6 operating layer
Operational Assurance	Universal Needs Attention queue plus Executive / Command Brief from permission-visible records.
Decisions, Handoffs & Meetings	Structured decision logs, acknowledged shift/position handoffs, and meeting actions that persist until closed.
Resource Lifecycle & Readiness	Resource requests from request through closeout, plus credential/qualification evidence and readiness warnings.
Plan-to-Operation & Schedule	Activate approved plans into trackable actions; schedule routine, preparedness, training, exercise, recovery and incident meetings.
GIS/COP, Live Intelligence & ICS	Map-first COP, source-aware intelligence, position workspaces, standardized forms and automated incident documentation.
Instructions, Training & Sandbox	Affected guidance, training and practice paths are synchronized with the current build and support controlled user learning.

Operational Assurance examples

- Overdue assignments or unresolved high-priority items.
- Work without a documented owner or follow-up.
- Aging resource requests or incomplete resource closeout.
- Meeting actions that remain open after the meeting.
- Qualification/readiness warnings tied to assignments.
- Recurring corrective actions or unresolved recovery handoffs.

Built for controlled use

Operational Assurance is a decision-support and accountability layer. It links users back to source records and requires human validation. Credential Readiness reports documented evidence and warnings; it does not confer qualifications. Plan-to-Operation requires users to verify the approved source plan and activation authority before operational actions are generated.

Instructions, Training and Sandbox stay synchronized

When these program capabilities change, the affected Instructions, Training, Context Help, Demo Center, public/program overviews, brochures and business/quality materials are updated in the same release. Sandbox practice supports users before production use.
